

Energy and Modeling

Tamerica has a unique understanding of energy-based economic development. We combine decades of leadership in economic development with skills in energy economics and modeling to advise communities on energy-related opportunities and threats. Our principals are active members of IEDC, the American Economic Association, Academy of Economics and Finance, and the International Association of Energy Economists. Ed Bee, President, wrote the first book to identify emerging opportunities in shale oil and gas: *Fueling Prosperity: The role of fossil fuels, renewables, and energy efficiency in economic development*. His paper at the International Studies Association in Toronto forecast the fall in global oil prices nearly a year before the collapse.

TAIMERICA specializes in economic development and location strategy for businesses, communities, and states worldwide. We have unrivaled credentials for delivering training in cutting edge development topics. Find out why 80 clients in Latin and North America continue to engage Tamerica with their most challenging development assignments.
